Response to Office Action of 5 May 2005 & Notice
of Non-Compliant Amendment dated 6 May 2005

CLEAN COPY OF AMENDED ABSTRACT

An auxiliary device for editing documents comprises a Windows® operation PC system peripheral input device and a modular key set with document editing functions. The modular key set is arranged on the Windows® operation PC system peripheral input device and connected to an I/O bus of the single-chip microprocessor. Therefore, a user can directly use the modular key set to edit documents without invoking chording key combinations or heavy use mouse.
